## ENGINEERING SERVICES CONTRACT MANAGER - MECHANICAL

To have overall responsibility for multiple engineering services projects, reporting on a regular and routine basis to the Operations Manager. Manage engineering services teams in delivering a consistent service to time, safety, quality, cost and ensuring the client's expectations are met in full and contract performance targets realised.

### What you'll do

- Ensure all works are carried out in accordance to the required standards and the Company's policies and procedures
- Support Operations Manager/Director of Engineering Services in delivering Business Plan
- Regularly visit sites at least once per week or as the site requirements dictate to monitor and manage quality and projects and liaise with the clients team.
- Reinforce the aims of SHEQ Department ensuring best practice is consistently adopted
- Develop the Construction Phase Health & Safety Plan, ensure that it is being maintained, complied with throughout the contract period and produce specific RAMS for each project
  - Liaise with clients to ensure their interests are being fulfilled and build key relationships
  - Ensure that acceptable quality standards are established, measured and maintained for each contract in line with client and Company requirements
- Oversee the conversion and development of the tender programme to construction programme with the Planner and Site Manager

### Have you got what it takes?

- Time served as plumber/pipefitter
- Proven experience in contracts management
- Commercially astute with experience in managing multiple projects con-currently
- Demonstrated ability to work within project timelines and meet them
- Up to date relevant knowledge of legislation
- Experience in relevant sector
- Up to date relevant knowledge of Health and Safety legislation
